

## Activity: Login Form

Create a **new login page** (filename is **login.html**) of your CCS website with the specifications:

- **Username:**
  - Set the field to receive 5-8 characters only
  - Must not be empty.
  - The default username is **admin**
- **Password:**
  - Set the field to receive 5-8 characters only.
  - Must not be empty.
  - The default password is **admin1**

### Other Details:

- Display an appropriate error message (displayed as a text) if the user did not input any username/password or the user has entered spaces only.
- User has entered an invalid username or password. (Allow three attempts only. Disable the text boxes for the username and password if attempts already exceed the allowable # of attempts. For every incorrect attempt, display the # of available attempts left so that the user will be guided.
- If correct credentials were entered (correct username and password), display an alert message You have successfully logged in then the page will redirect you to the home page.
  - E.g.

Welcome **"Your Name!** You have successfully logged in!"

#### Note:

The **Your Name** in the sample output is the username that you have entered in the username text box.

In the home page, the Username of the user must appear somewhere at the upper right portion of the page. When the user clicks the Logout button or link, it will redirect you back to the login page (however, the username and password fields must be cleared).
